

Hello all BCXers! This is project update 012. Our Turing-complete Smart Contract is completed and is now on testnet.

[Core/dev] Have completed the createEthTx interface to resolve the 32-bit integer overflow truncation bug during large transfers

[Core/dev] Have fixed the calculating errors when consuming gas and bcx

[Core/dev] Have written a smart contract template for issuing tokens and improve the development documentation

[Test] Rich the test cases to test the security of the smart contract

[Test] Continue to test smart contract on testnet
